Srishti Jaiswal

srishtj@clemson.edu | Clemson, SC | srishti-jaiswal.com | github.com/srishtj | linkedin.com/in/srishtj3

Education

Clemson University *Expected December 2027*
B.S. in Computer Information Systems | Minors in Mathematics and Artificial Intelligence
Awards: Dean's List, Multiple Semesters (2023–2026)

Technical Skills

Languages: Python, Java, C++, SQL
AI & Machine Learning: LLMs, RAG, AI Agents, Tool Calling, Prompt Engineering, Embeddings, Model Evaluation
Frameworks: PyTorch, scikit-learn, pandas, Hugging Face Transformers, Detectron2, LangGraph, FastAPI, Flask
Cloud & Data: Azure (OpenAI, AI Search, App Service, Blob Storage), Docker, Git, SQLite, Redis, Neo4j, Qdrant

Experience

Incoming AI Research and Innovation Intern Spring 2027
BMW Manufacturing *Greenville, SC*

AI Engineering Capstone Intern Aug 2026 – Present
TD SYNNEX-Sponsored Project | Clemson University *Clemson, SC*

- Lead a four-person team building an Azure retrieval-augmented generation (RAG) support assistant that generates cited troubleshooting guidance from Microsoft documentation; own normalization of 100+ technical PDFs.
- Built multi-turn conversation support with Azure OpenAI and AI Search, adding server-side threads, follow-up query rewriting, and escalation for requests the assistant cannot resolve.
- Ran a reproducible evaluation of 1,566 live trials across 97 questions comparing prompt and retrieval configurations; identified escalation improvements that reduced answer coverage and failed policy-safety checks.

Information Technology Intern May 2026 – Present
Watt Family Innovation Center, Clemson University *Clemson, SC*

- Built IPX-bot, a Python/Flask LLM assistant that answers natural-language AV troubleshooting questions using read-only room, device, and SQL lookup tools.
- Developed a pipeline syncing 300+ devices and 3,000+ streams across 50 rooms into SQLite with change tracking; integrated Claude, Gemini, and local models via Ollama, with automatic Gemini model fallback on quota exhaustion.
- Engineered a Java scheduler for the building's display lights, automating about 80% of recurring lighting operations.

AI Development Intern Jun 2025 – Jul 2025
Telerad Tech *Bengaluru, India*

- Built a Python pipeline to standardize chest X-rays and convert pneumonia annotations into training data; trained a Detectron2 model that scored 92% on the company's internal accuracy benchmark.

Research

Undergraduate Research Assistant Aug 2026 – Present
Watt AI Program, Clemson University *Clemson, SC*

- Design evaluations and tests for an evidence-grounded RAG pipeline over hospital safety reports, scoring retrieval relevance, answer faithfulness, and citation accuracy on labeled questions.

Projects

EchoSystem AI 2026 – Present
Multi-Agent Market Intelligence Platform | Python, FastAPI, LangGraph, Neo4j, Qdrant

- Built a market intelligence app combining Neo4j knowledge-graph retrieval and Qdrant semantic search to research companies and produce cited analyses.
- Orchestrated analyst and auditor agents that verify conclusions against sources, revise unsupported claims, and flag unresolved findings for human review.

Leadership

President (Formerly Secretary) Jan 2025 – Present
Girls Who Code at Clemson *Clemson, SC*

- Lead a 100+ member chapter; organize and teach programming, AI, and interview-prep workshops, and coordinate mentorship and industry speaker events.
